

BRANDON SHIN

Santa Clarita, CA | (806) 928-6510 | bmschin@uci.edu | [LinkedIn](#) | [Github](#) | <https://bmschin.vercel.app/>

Education

University of California, Irvine

Sept. 2026 - Dec. 2027

Master of Software Engineering

- Recipient of \$20,000 Student Fellowship

University of California, Riverside

Sept. 2021 - Jun. 2025

Bachelor of Science in Computer Science

Skills

Languages: Python, TypeScript, JavaScript, C++, C#, Java, SQL, Luau

Frameworks/Libraries: React, Node.js, Express, FastAPI

Tools/Platforms: Git, GitHub, Jira, Unity, Vite, Vercel, Render, Roblox Studio

Experience

Tatum Games

Jul. 2026 - Sep. 2026

Software Developer Intern

Remote

- Coordinated a five person web development team using Codelgniter and XAMPP, maintaining documentation for project requirements, technical decisions, and development progress
- Researched potential markets and use cases for MIKROS, documenting findings to support product decisions.
- Coordinated development through GitHub and Jira, reviewing progress and resolving blockers to keep the project on schedule

UCR XCITE

Apr. 2023 - Jun. 2025

Undergraduate Software Developer

Riverside, CA

- Developed three educational AR/VR applications using Unity and C#, collaborating with four professors across computer science, chemistry, and theatre
- Led a four person cross-functional team of developers and designers for two years, coordinating feature development, testing, and deployment
- Built an AR encryption application demonstrated to 100+ computer science students and a molecular-equilibrium simulation used by 50+ students
- Deployed iOS applications through Xcode and TestFlight and maintained source code using Git and GitHub
- Led Unity and programming workshops during two consecutive XCITE STEM Summer Camps

Projects

[Product Sentiment Analyzer](#)

Jul. 2026 - Present

- Developed a full-stack platform that transforms Reddit discussions into structured insights about product opinions and recurring complaints
- Implemented text-cleaning, word-frequency, and n-gram analysis functions with automated pytest coverage
- Deployed the React frontend on Vercel and FastAPI backend on Render

[Ranking Video Compiler](#)

Jun. 2026 - Jul. 2026

- Built a full-stack video compilation tool supporting URL-based imports from TikTok, Instagram, Reddit, and YouTube
- Implemented drag-and-drop ranking, video previews, trimming, and persistent job state using React, TypeScript, and Express
- Created a Python media pipeline with yt-dlp and MoviePy that combines a variable number of clips into a 60-second video in approximately 3-5 minutes

[Autonomous Car](#)

Sept. 2024 - Mar. 2025

- Collaborated with three students to build a miniature autonomous vehicle using OpenCV for real-time line following and sign recognition
- Implemented computer-vision logic that interpreted camera input to support navigation decisions
